Market Release   BBC version May 1985
                    (Bulk ROMs available now)

Information as at   End April 1985

AI No 5/85

Key Features

1.   Termulator is a ROM which enables the BBC Microcomputer to
      emulate a variety of different computer terminals.

2.   Emulations provided are ANSI (VT100); VT52; Tektronix 4010;
      'glass Teletype'; a 'hardcopy' terminal, and a special '
      BBC terminal' which enables the host computer output to be
      sent directly to the BBC Microcomputer's VDU driver.

3.   With Temulator it is possible to use the BBC Microcomputer
      as a terminal for almost any mainframe computer or computer
      network.

4.   It is not necessary for the user to be familiar with the
      BBC Microcomputer in order to use Termulator and a
      comprehensive user guide is included in the pack.

Note on the authors

Ken Blanshard, Simon Barnes and Brian Williams are all members of
the Computer Science Department at the University of Sussex:

Katy Edgcombe is at present a freelance author, having previously
worked at the University of Cambridge Computing Service.
